Introducing the Latest in Imprint Document Security
Cobra Imaging Products' New
MultiStriped Multipass Fluorescent Security Ribbon

Ribbon Description

This MultiPass, MultiStriped, Fluorescent nylon numbering ribbon is new to the Security Printing Industry. The ribbon has narrow stripes (33 in a 1.5" ribbon) of alternating red and blue and the red stripes fluoresce orange/red.

Sizes

The custom made inking machine was designed and built specifically to ink 1" nylon; however, it can ink any width from 1/2" to 1-1/2". We are current inking 1" nylon and any spooled or cartridge ribbon that requires 1" could be manufactured quite easily, (***excluding*** any cartridges with internal reinking systems or any cartridge that utilizes a "mobius loop" feature).

Opportunity

This is a very unique product that should have great potential in any Check Security or Document Security applications.

Printronix Exclusivity

We have an ongoing purchase agreement with a current reseller for several thousand MultiStripe Printronix ribbons per year. This prevents us from offering a MultiStripe Printronix ribbon to any other reseller. The agreement applies to ALL models of Printronix, but it does NOT include Genicom or Tally even though they are owned by Printronix. The agreement does NOT apply to any other brand of printer such as Dataproducts, Epson, Okidata, INOTECH, HP, Troy, etc. nor does it apply to any encoders such as NCR, Atlantic Zeiser, Autographic, and Nale.
